What is the "Gradient Start" setting in an Empower instrument method? - WKB2231

**ENVIRONMENT**
- Empower instrument method

**ANSWER**
- **Gradient Start** allows a user to change the time the gradient starts with respect to the injection, adding or decreasing the gradient delay during method transfer.
  - Start the gradient "before injection" to move the peaks to earlier retention times.
  - Start the gradient "after injection" to delay the gradient shifting peak elution to a later retention time.
